

Univariate Plots

PH345: Winter 2025

Phil Boonstra

Univariate Plots

Univariate plots are used to visualize the distribution of a single variable.

Examples

- Histograms
- Boxplots
- Barplots

Ultra-runner data (Samtleben, 2023)

$n = 288$ ultra-runners (completing 100km ultra-marathons)

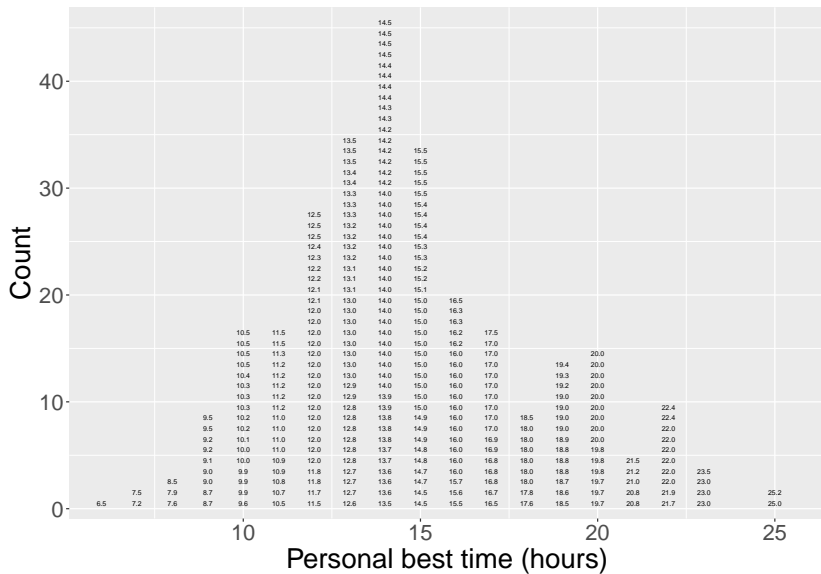

Each runner's personal best (in hours):

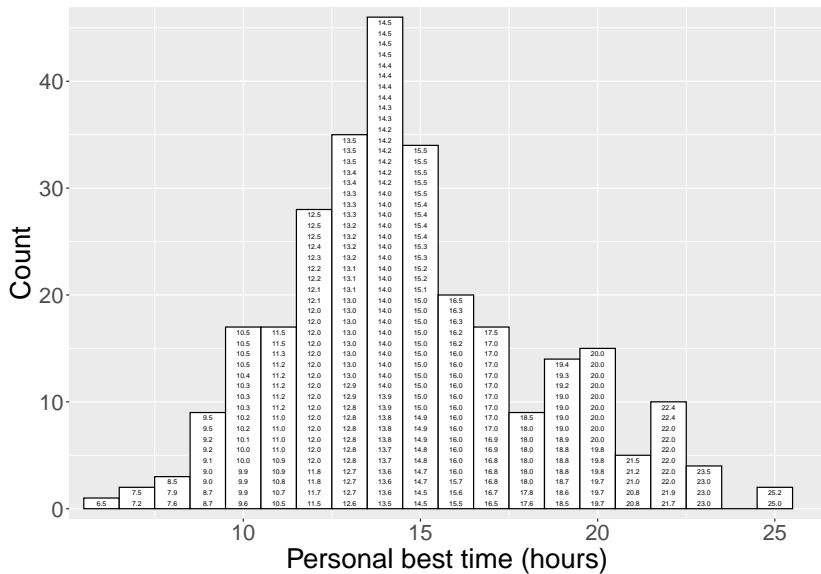

14 7.6 14.2 14.33 17 12 16 16.16 9.95 17.55 12.5 23 18.85 8.5 19.33 16 18 12
14.38 15 19.25 14 14.21 14.91 14.5 19 18.5 15 20 12.16 14.82 12.99 13.5 12.98
9.2 10 13.55 14 15 14 22 15.33 15.53 12.26 12 13 10.77 13.98 14 16 12.05 20.83
14 14.3 14.78 13.83 16 12.9 19.67 14 16.67 10.25 15.38 13.35 14 22 7.15 14 12
16 9.5 15.13 12.99 18.77 15 11.25 14 13 14.53 18.75 16 14.5 18.66 15.5 12.77

Creating a histogram

1. Choose a bin size and a center value, e.g. one hour bins centered at the integers would be denoted as $(5.5, 6.5]$, $(6.5, 7.5]$, $(7.5, 8.5]$, etc. Bins must be non-overlapping, and there should be enough bins to completely cover the data.
2. Assign each runner to a bin, e.g. 12.98 goes into the $(12, 13]$ bin and 12.0 goes in to the $(11, 12]$ bin
3. Plot bars for each bin, with the height of the bar corresponding to the number of runners in that bin

Counts vs density

Bin width of 5 hours (too large!)

Bin width of 3 minutes (too small!)

Boxplots
